TECHNICAL DATA SHEET/ ROCKDRILL GREASE

Product description

Rockdrill Grease is a light brown, lithium/calcium soap-based semifluid grease specially formulated for pneumatic rock drills operating in the demanding conditions of South African mining. Enhanced with anti-wear and tackiness additives, it delivers exceptional corrosion protection and reliable performance under harsh environments.

Rockdrill Grease may be applied through the commonly used air-line grease lubricators where, due to its consistency, it is generally more economical to use than oil.

Characteristics:

NLGI Consistency	*000*
Worked Penetration at 25 °C	*460*
Base Oil Viscosity at 40 °C, mm2/s	*260*
at 100 °C, mm2/s	*20.80*

Features:

- Provides outstanding corrosion protection through advanced additive technology and a lithium/calcium soap base with excellent water repellency.
- Highly tacky and water-resistant, ensuring long-lasting adherence in critical areas without misting—unlike traditional oil-based lubricants.
